FROM: Ai Novak

DATE: 7/16/85

SUBJECT: Bendix - North Hollywood

FILE NO:

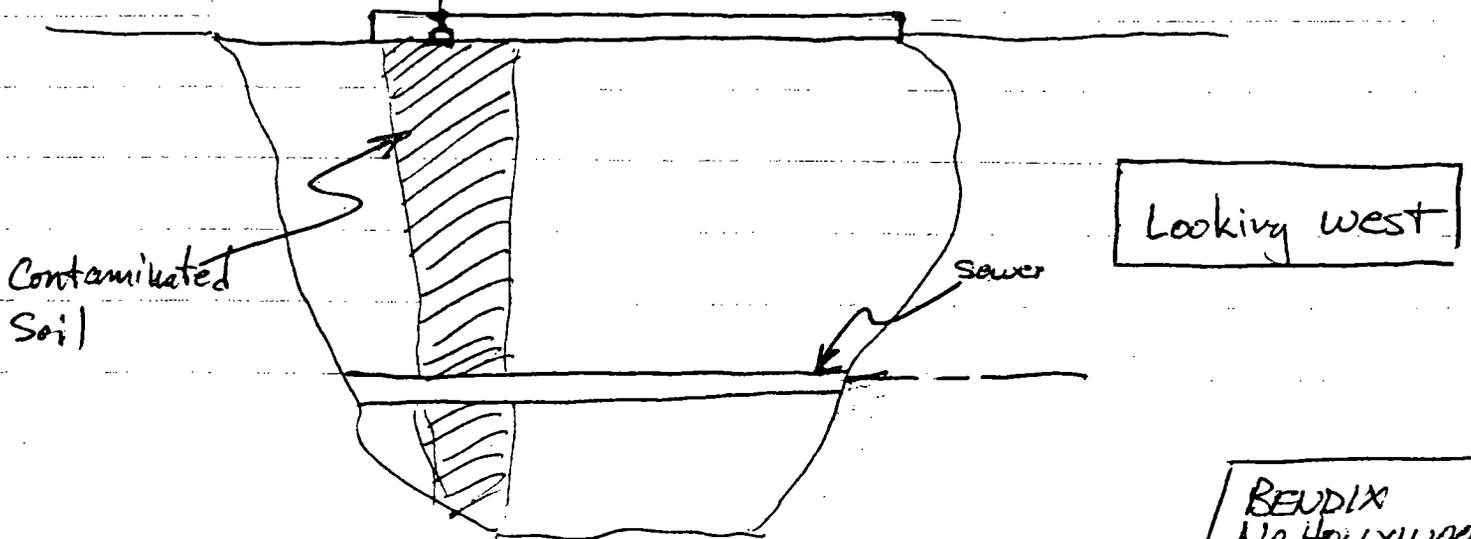

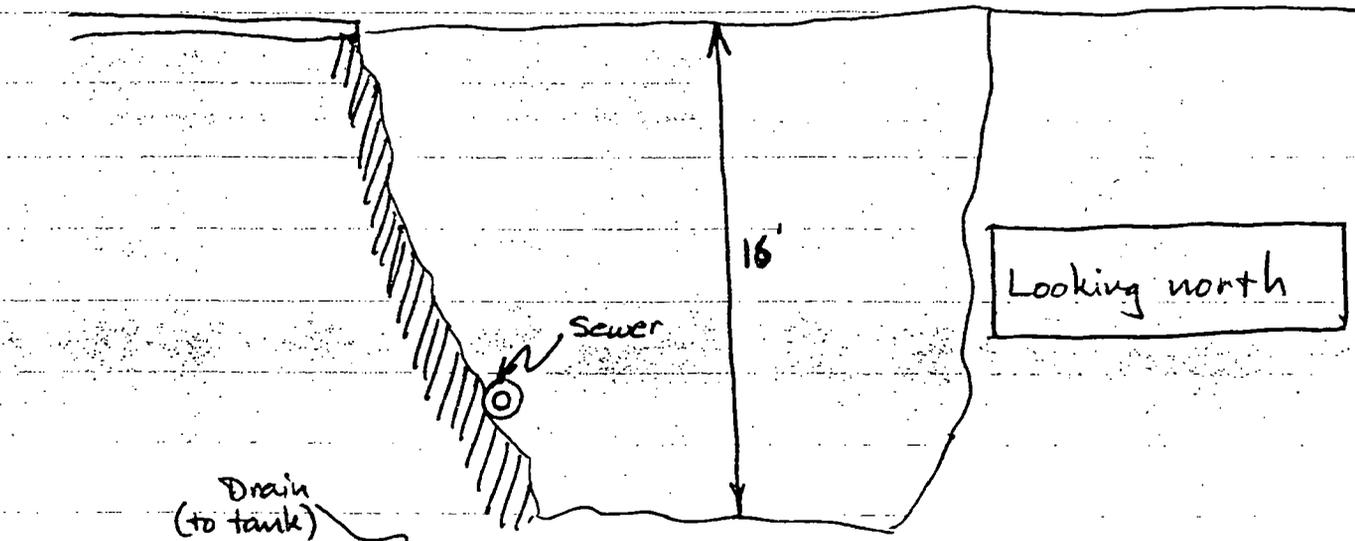

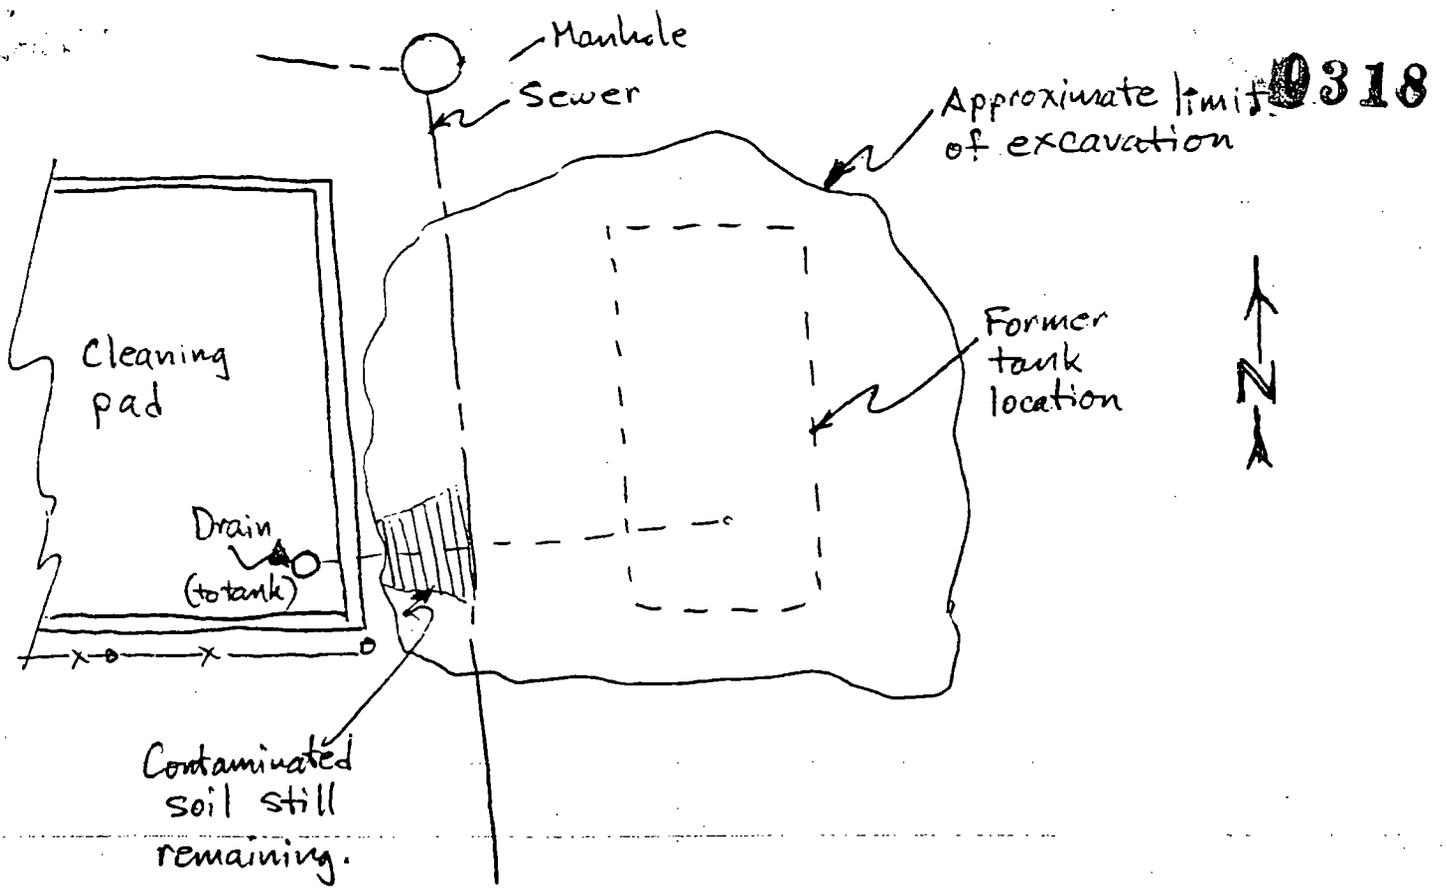

916053098

SUMMARY OF COMMUNICATION:

On Tuesday 7/16/85 Bendix excavated and removed >100 yds of oil contaminated soil during cleanup operations at the location of a removed underground waste oil tank. The tank was found to have holes in it when it was removed 4/29/85. Additional work established the extent of contamination which led to the work conducted on 7/16. In addition to the tank leak, it appears that the drain from the related cleaning pad also leaked as evidenced by a stain on the sidewall of the excavation. This material could not be removed without endangering the integrity of a 6" tile sewer line buried in the ground there. Bendix removed all the contaminated soil associated with the tank leak and has backfilled the hole. They will be boring a test hole through the remaining contaminated soil to determine the extent. Once this is known, remedial measures will be proposed.

CONCLUSIONS, ACTION TAKEN OR REQUIRED:
